Ag Leader Introduces EZ-Guide[®] 500

Ames, Iowa, January 23, 2007 – Ag Leader Technology, Inc., a leading manufacturer of precision farming equipment, introduced the AgGPS[®] EZ-Guide[®] 500 guidance system. The EZ-Guide 500 joins the EZ-Guide Plus as part of Ag Leader's family of guidance systems designed to meet the needs of both growers and service providers.

The Ag Leader EZ-Guide 500 features a large, easy-to-read 7-inch color display and a built-in lightbar with 31 guidance LED's that are highly visible even in bright light. The display provides users an "overhead" or "perspective" view of the operation while the map view provides a real-time, color coverage map. The unit supports multiple guidance patterns and also records data from field operations that can be transferred to a PC via a USB flash drive.

Ag Leader will offer two versions of the EZ-Guide 500 unit. Depending on their accuracy needs, users can choose between an EZ-Guide 500 capable of using the free WAAS signal, which provides 6-8 inch pass-to-pass accuracy or an EZ-Guide 500 capable of using the OmniStar HP/XP subscription service for 2-4 inch or 3-5 inch pass-to-pass accuracy.

The EZ-Guide 500 is compatible with Ag Leader's EZ-Steer[®] assisted steering system for hands free steering on hundreds of vehicles. Later in 2007, the EZ-Guide 500 will also support the EZ-Boom[™] automated application control system for an economical approach to rate and boom section control.

"The EZ-Guide 500 has been designed to meet the needs of guidance users today as well as their needs in the future," says Matt Leinen, GPS Product Manager for Ag Leader Technology. "The addition of the EZ-Guide 500 to Ag Leader's product offering is another example of Ag Leader's commitment to provide the products that customers demand for their precision farming operation."

About Ag Leader

Ag Leader is a pioneer and recognized technology innovator of precision agriculture hardware and software. Located in Ames, Iowa, the company manufactures and markets industry leading precision farming technology designed to help growers make smart, profitable business decisions. Founded in 1992 the company has achieved consistent growth and expansion by providing value-based products that help growers achieve and maintain a successful operation.
