

## Ag Leader Technology Announces GPS 1000 Plus

---

November 3, 2003

The Ag Leader GPS 1000 Plus is an "all in the antenna" low-profile, economical DGPS receiver. It is ideal for field tasks that don't require sub-meter position accuracy for guidance - like yield mapping, planting, fertilizer and chemical application rate logging, site verification, etc. The low profile unit features enhanced weak signal tracking for better performance around farm buildings and trees. It can also output a radar speed signal for input into your rate controller.

The unit is factory set so that it requires no setup for use with Ag Leader monitors. Its lightweight, rugged design also makes it ideal for use as a second yield mapping GPS unit or as a handheld logging device with a Pocket PC. The GPS1000 Plus offers four-meter accuracy without differential correction and two-meter accuracy using WAAS differential.

The Ag Leader GPS 1000 Plus complements an already substantial rollout of new product offerings from the precision farming pioneers. The company recently introduced the powerful new INSIGHT precision farming system, offering farmers the most advanced precision farming system in the industry. It also released significant upgrades to its popular precision farming software family - SMS Basic and SMS Advanced. The GPS1000 Plus integrates seamlessly with the Ag Leader system and is fully supported by Ag Leader's industry-leading technical support team.
